

PIIPPO BALER TWINES INCLUDE VALUABLE BENEFITS

ACTUAL METERS GUARANTEED

Thanks to our accurate production standards, the length of the roll exactly follows the label.

SOFT AND RELIABLE

Piippo's manufacturing technology and raw material base enables soft twine and tightly secured knots. Piippo twine unwinds smoothly without getting tangled in the baler. Rolls with constant pressure remain well shaped without telescopic lifts in the middle of the spool.

EXTREME TENSILE STRENGTH FOR EVEN THE MOST CHALLENGING CONDITIONS

Film structure based Piippo twine ensures unparalleled tensile strength. Bales stay in good shape during storage and even withstand rough handling.

SAVINGS IN SPARE PART COSTS

The softest twine on the market runs smoothly in the baler and prolongs the lifetime of knotters and other expensive metal parts of the baling machine.

SUSTAINABILITY

Sustainability in Piippo's operations is achieved by efficient use of resources. As a result of this, our clients will benefit from higher knot strengths, cheaper prices per meter and less waste. Unrivalled tensile strength enables the use of thinner twine compared to standard products.
